

ICE BLITZ

ICE BLITZ is an extremely efficient de-icer for use on all vehicle windscreens, windows locks and headlights etc., having no adverse effect on paintwork or rubber. The propellant is carbon dioxide which for this purpose is technically better than other propellants for the following reasons:-

Retains its pressure at extremely low temperature.

All the liquid in the aerosol is active material containing 100% Isopropyl Alcohol and Glycols.

ICE BLITZ dissolves the ice and leave a film which prevents re-freezing.

ICE BLITZ will operate efficiently at sub-zero temperatures.

DIRECTIONS FOR USE:-

First remove any loose snow, hold the can upright and with the nozzle pointing in the right direction, spray from approximately 4-6 inches from the part to be sprayed.

On windscreens and windows, spray from side to side, work downwards from the top.

Leave de-icer to work for a few seconds then wipe with a clean cloth.

Avoid getting vapour or spray onto skin or in the eyes.

Do not spray inside the vehicle.

Flammable mixture – Do not spray near fires or naked flames.

Do not store above 50°C.
