

## BATTERY PROTECTOR

Battery terminal protector protects from wear and corrosion and seals out moisture. Helps prevent the furring and oxidation of battery terminals, and provides a protective film.

Suitable for use on battery terminals, clips and connectors. Acid leak indicator, which turns red when acid is detected. Can also be used as an anti corrosion grease.

### Features and Benefits:

Cleaner and protective coating to prolong the life of batteries

Cleans off corrosive deposits on battery terminals.

Protective grease prevents wear to terminals through clip movement.

Compatible with various materials including metals and most plastics and rubbers.

Helps prevent the furring and oxidation of battery terminals

Repels moisture and provides a protective film

Highly visible Acid leak indicator, which turns red when acid is detected.

Anti-corrosive. Protects against corrosion.

Increases efficiency by reducing terminal resistance

Improves electrical continuity thus improving starting.

Waterproofs terminals.

Eliminate the potentially corrosive effects of battery acid

Suitable for use on batteries and earthing straps in cars, buses, trains and plant hire equipment. Battery terminal protector is especially ideal for use on batteries that are exposed to the elements, such as fork lift trucks and generators as it protects from wear and corrosion and seals out moisture.
