

## **OPEN GEAR LUBE**

### ***GEAR LUBE***

OPEN GEAR LUBE lubricates and protects open gears and sliding surfaces in all manufacturing, crane and plant departments, mines and quarries, shipyards, construction, transport and other industries

OPEN GEAR LUBE displaces water and moisture and protects against rust and corrosion. Unlike other similar products.

OPEN GEAR LUBE does not cause a build up between gear teeth.

OPEN GEAR LUBE lubricates all sliding surfaces and moving parts and prevents metal to metal contact.

OPEN GEARLUBE is used whilst machinery is in motion which means downtime is kept to a minimum.

OPEN GEAR LUBE is ready to use – it needs no preparation, heating or premixing.

OPEN GEAR LUBE reaches the most inaccessible places. Simply spray a smooth coating onto gears and sliding surfaces whilst the machinery is in motion.

OPEN GEAR LUBE does not drip or throw off and there is no mess, no spillage and therefore no wastage.
