

PRO SEIZE

ANTI-SEIZE & LUBRICATING COMPOUND

PRO SEIZE is a high quality, high temperature, high pressure anti-seize and lubricating compound which lengthens the life of nuts, bolts, screws and other metal components.

- Gives superior lubrication under extreme conditions.
- Helps to prevent pitting, corrosion, seizure and distortion.
- Allows nuts to go on tighter and come off easier.
- Reduces wear and friction on metal and rubber.
- Cuts replacement cost and provides high temperature resistance.
- Reduces loss due to heat distortion and incorrect tolerance.
- Does not harden, separate or evaporate under abnormal conditions.
- Acts as a sealant by making tighter joints and reducing friction.
- Inert to natural and synthetic rubber and metals.
- Can assist in overcoming problems caused to vehicles by snow, sand, salt and water.
- High film strength - aluminium colour.
- NON-CORROSIVE to most metals.
- Operates from -30°C up to 800°C as a lubricant.

RECOMMENDED USES:-

CONSTRUCTION - Outdoor pumps, pneumatic hammers, universal joints, pipe fittings, pins, bolts etc.

MOTOR INDUSTRY - Heat and pressure gaskets, fuel injector nozzles, valve cages, pre-combustion chambers, hydraulic fittings, exhaust fittings, manifolds, brake callipers, exhaust connections, towing bracket bolts, radiator drain plugs.

INDUSTRIAL - Stay bolt and tubes, boiler fittings, pulleys, sprockets, cables, dies and die casting machinery, burner assemblies, compressor heads, etc.
