

TURBO – K

MULTI PURPOSE ALKALINE BACTERICIDAL DEGREASER

TURBO - K has undergone a revision in formulation which has improved the bactericidal and degreasing properties plus increased its functionality.

TURBO - K still incorporates the highly efficient bactericide which is active against both gram positive and gram negative bacteria. This function is extremely useful, if not essential, when cleaning within food operations or factories

TURBO - K can still be used through a cold pressure wash but can also be used, with complete peace of mind, through a hot pressure wash. TURBO - K can now be used on painted surfaces through a hot pressure wash. The increased functionality now also extends to manual cleaning operations. For heavy duty degreasing and sanitising in one operation TURBO - K is the product to specify.

TURBO - K is also highly effective at removing body fats from shower areas, swimming pools, bathrooms, etc.

TURBO - K is concentrated - being effective as a degreaser, sanitiser and pressure wash additive at dilutions of 50:1 with water (this is equivalent to the 2% setting on pressure wash machines).

TURBO - K is recommended for removing food fats, greases, oils and unsightly waste from the food processing industry. It is also recommended for removing heavy greases, oils, sludge, traffic film from vehicles, etc. After using TURBO - K the area will not only be visibly clean, but also hygienically clean.
